To Whom It May Concern,

**McConnel Dowel, Abigroup, KBR Joint Venture**

The NPI Stage 2 pipeline project will connect from the stage 1 termination point at Lander's Shute WTP (Eudlo) and extend to the Noosa WTP near Cooroy. The project consists of approximately 48 kilometres of bi-directional pipeline and associated facilities. The project footprint is approximately 148 hectares, comprised of a 30 metres wide pipeline corridor plus associated facilities of four pump stations, one balancing tank and two water quality boosting facilities.

The tight time frame of the project requires fast and reliable information. 1300 LOCATE have consistently provided accurate data with minimal turnaround times. 1300 LOCATE have provided underground utility location and vacuum excavation services on an on-call basis for the entirety of the project, some 2 ½ years to date. As a result of consistent accuracy and reliability, 1300 LOCATE has been the sole-provider for these services for the past twelve months.

The 1300 LOCATE team, from the office staff to the team on-ground are all pleasant and easy to deal with and constantly strive to exceed our expectations and provide good value for money. We have no hesitation in recommending 1300 LOCATE for any utility location or vacuum excavation works.
