

WESTERN CORRIDOR
RECYCLED WATER PROJECT
EASTERN PIPELINE

To Whom It May Concern:

The Western Corridor Recycled Water Project (WCRWP) is the largest recycled water scheme of its kind in the southern hemisphere. It involves the construction of approximately 200km of underground pipeline, three Advance Water Treatment Plants and six pump stations throughout Brisbane and Ipswich.

Tony Festa and 1300 LOCATE have been an integral part of the underground services location team for the project. This team was formed to ensure accurate detection of all underground services so the information could be used for the design and construction of the pipeline and associated structures. Due to the tight timeframe of the project, fast turnaround times were required for all service location requests.

1300 LOCATE have always managed to provide accurate data in a very timely manner. The services provided to the WCRWP have been diverse and consistently provided in an exceptional and professional manner.

Tony Festa, on behalf of 1300 LOCATE, has always kept in contact with myself and my colleagues to ensure our expectations for service have been met in a satisfactory manner and that we are receiving good value for money.

1300 LOCATE have been one of two companies retained from the initial team to provide responsive services for our construction teams in the post design phase of the project. They have always provided exceptional, value for money service with the minimum turn around times.
